PROFILE

Games & Immersive Media student focused on gameplay systems and core mechanics. Experience with Godot (C#), Unreal Engine 5 and Blender across several team and solo projects — from concept development to playable prototype. My focus lies on gameplay programming and system design, complemented by experience in 3D art and game design. I enjoy working in teams and taking on responsibility, including as Scrum Master.

EDUCATION

09/2025 – exp. 2028	Games & Immersive Media (B.A.) Hochschule Furtwangen

SELECTED PROJECTS

Gothica Solaris — *First-Person Roguelite Dungeon Crawler · Godot (C#) · Team of 4 · 6 weeks*

- Scrum Master; gameplay systems (Health, Inventory, Loot, Socket, Insanity) using a component-based architecture
- Initial AI implementation for the Mage enemy, 3D assets, texturing, and the first playable dungeon level design

Average Goblin Game — *Third-Person Tower Defense Action · Unreal Engine 5 · Team of 5 · 2 weeks*

- Concept development, game design, and enemy AI & animation implementation
- Tower mechanics, core gameplay mechanics, balancing, sound design and audio integration

Godot Island Generator — *Procedural Terrain & Water System · Godot, GDScript, Shaders · Solo project*

- Developed a procedural island generation system with dynamic terrain and water
- Implemented biome-based terrain texturing based on height and slope
- Created custom terrain, water and toon-shading effects using shaders

Sea Team — *Asymmetric Co-op Board Game · Team of 4 · 5 weeks*

- Game mechanics, rulebook writing, playtesting and balancing
- Physical prototype including a hand-engraved wooden box
